

SUMMARY

25 years ago, I started developing my skills in web development. I began with ASP and later transitioned to ASP.NET using VB.NET, and eventually C#. Over the years, I gained experience in Ruby on Rails, PHP with various frameworks, Python for backend development, and frontend technologies including jQuery, ExtJS, Angular, Vue, and vanilla JavaScript.

This extensive and versatile experience has laid a solid foundation for my understanding of both frontend and backend development. My broad areas of interest foster excellent problem-solving skills, adaptability in changing circumstances, and a balanced approach to achieving results, making decisions, and taking responsibility. I value open communication, mutual respect, and rely on data-driven decision-making.

COMPETENCIES

Technical Competencies:

Full Stack Ontwikkeling: Years of experience with frontend and backend frameworks, including ASP.NET and PHP MVC.

Software Architecture: Expertise in designing scalable software for various industries.

Framework Expertise: In-depth knowledge of ASP.NET MVC, Razor Pages, Vue, Angular, Ext JS, and PHP MVC.

Project Management & Leadership:

Project Management: Managing complex projects, including planning and resource allocation.

Team Leadership: Leading and mentoring development teams, both local and offshore.

Communication & Analytical Thinking: Effective stakeholder communication and data-driven decision-making.

Personal Competencies:

Adaptability & Responsibility: Quick adaptation in dynamic environments and accountability for project outcomes.

Eagerness to Learn: Constantly exploring new knowledge and techniques.

Decision-Making: Effective decision-making based on analytical insights.
